

ABSTRACT OF THE DISCLOSURE

A mounting assembly for a discharge conduit of a medical treatment device, such as a dialysis machine. The mounting assembly has a connector member detachably engageable with a discharge nozzle of a discharge conduit and a suction cup that can be mounted on a rim of a waste receptor, such as a sink or a toilet bowl. The mounting assembly supports the discharge nozzle directly above the opening of the waste receptor, thereby facilitating discharge of the liquid waste directly into a municipal sewage line.
